

Business Challenge

- Increasing waste collections
- Reducing rebates
- Limited waste reporting
- Unfit / inefficient allied equipment.
- High waste contamination

Service

- Integrated waste management
- Equipment supply & maintain
- Food by-product to animal feed
- Waste-less Steering Group

Savings & Benefits

- 1500 tonnes diverted from landfill
- £64,000 rebates generated pa

Additional Benefits:

- Market analysis / forecasting
- Bespoke MI
- Improved production / utilised manpower
- Reduced Op Costs

BRITAINS LEADING PASTA MANUFACTURER & EXPORTER

With roots of over 130 years their two factories within the UK supply to a wide range of snack manufacturers across the globe, in over 40 countries. Their expertise converts ingredients including potato, wheat, maize and pulses into quality household food brands.

THE CHALLENGE

Spiralling costs associated with increased waste collections, contaminated food by-products destined for landfill, fully depreciated equipment not working efficiently and limited management information relating to years of waste generation was stifling a successful operation and threatened to undermine an established brand. With incumbent supply chain reacting to issues rather than proactively leading for change, old habits were quickly having an impact on bottom line performance with risk of non-compliance

THE SOLUTION

A full process audit conducted by our experienced waste managers quickly highlighted a number of on-site opportunities to reduce waste generation through upstream recycling segregation, changes to site operatives' way of working, newly specified containers and allied equipment plus the sourcing of sustainable food re-use outlets.
