

# A world-class waste solution from PWS is at the heart of one of the UK's leading waste collection businesses.

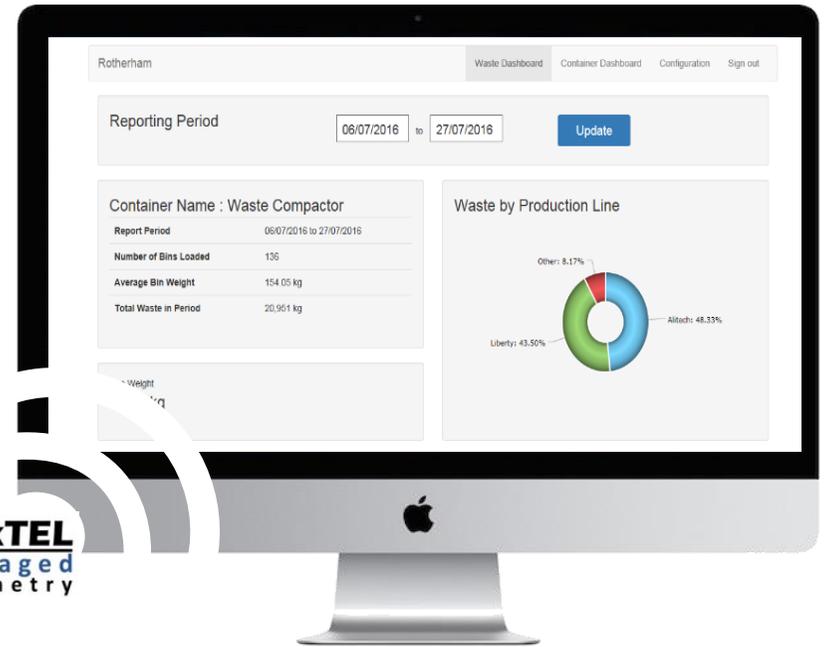

## THE CHALLENGE

PWS were the innovative, competitive partner to deliver instant savings and ongoing returns to a fast-moving business. A large regional waste recycling company had numerous compactors, with unpredictable fill rates and no data capture. A requirement for automated fill levels, pressure monitoring and reporting, including alarm and email warning alerts. This approach provides streamlined processes and a smoother and more efficient journey for the client.

With the ability to predict emptying cycles and a customisable fill level thresholds to maximise fill level the client was able to both void overfilled and overweight containers and improve health and safety compliance at for both their drivers and end clients.

Our specialist team has the skills to be able to review waste and recycling costs from every angle, covering waste reduction, circular economy and waste prevention.

## THE SOLUTION

- Packaged Groups PackTEL technology and dashboard deployed on PWS supplied compactors
- Realtime Online dashboard implemented; automatic tracking of fill cycles, fill rates and emptying timing; reduced vehicle movements
- Smooth collections managed since implementation with no over or under fills; less machine jams and maintenance issues
- Initial trial completed successfully and rolled out throughout group
